**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gary Yacura on February 21, 2008.

The application has been amended as follows:

a.) Cancel claim 20.

### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method of transmitting and decoding data and a detector/decoder arrangement. A search of prior art records has failed to teach or suggest alone or in combination:

A method of transmitting data in a communication system, comprising the steps of:

“encoding bits of a data stream with check-biregular, nonsystematic repeat-accumulate codes, the encoding of the bits including using a check node layer, the check node layer having a non-zero fraction of check nodes with a degree of 1” as disclosed in claim 1.

A method of decoding data in a communication system, comprising the steps of:

“detecting one or more transmitted signals of a data stream encoded with check-biregular, nonsystematic repeat-accumulate codes to obtain a detection output; and decoding the detection output to obtain a decoded stream of bits for reconstructing the data stream, the decoding of the bits including using a check node layer, the check node layer having a non-zero fraction of check nodes with a degree of 1” as disclosed in claim 4.

A combined detector/decoder arrangement for a receiver in a communication system, comprising:

“a detector for performing a bit detection of a data stream including check-biregular, nonsystematic repeat-accumulate codes received on one or more channels to provide a detector

output; a first node decoder for determining extrinsic values from the detector output for use as a priori knowledge by the detector for a next bit detection iteration, and for outputting reliability values, wherein the detector and first node decoder are represented by a first transfer characteristic curve, and the first node decoder includes a check node layer, the check node layer having a non-zero fraction of check nodes with a degree of 1” as disclosed in claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
